I haven't figure it out how the multiplayer part works!. Oh boy! No negative reviews! You should get thi- Stop right there! This, is a unity game about rolling as a cube. Frustrating right? Now its \$5. To move a cube on a unity engine. AND that "local multiplayer" tag sounds fun? Don't call for your friends to come over and bring a controller. Because the dev doesnt understand local multiplayer. Its LAN. You now need your friends to pay \$5 to move a cube against you in a unity game that shouldn't even cost money. Don't get me wrong, he made a good job of making it sound fun, but always remember the refund feature exists.
